product key code Sentinel SL

Problem (public)

Product code (product key): what is it, where is it, what should I do with it?

Solution (public)

Product code (or product key) is a unique set of characters used for ASCON software license activation.
It consists of letters and digits separated by dashes, e.g.
003d411c-7586-4d44-9b3c-cc4012b02ce9

Product code is issued for a customer upon a purchase (or a special trial agreement). In these cases product code is sent to predefined customer contact by e-mail.

Also product code may be printed on some specially issued KOMPAS-3D distributive boxes.

Product code activation is described in [1]FAQ#7001157.
