Keywords

hasp, srm, install, reinstall, rte, driver

Problem (public)

How should I install/reinstall Sentinel Run-time Environment (RTE)?

Solution (public)

Before installation close all HASP-protected applications and disconnect all Sentinel HASP usb-keys

- Download actual [1]Sentinel_LDK_Run-time_setup.zip
- Unpack it
- Run HASPUserSetup.exe and follow installation instructions

[2]Command Line Installation

- Download actual [3]haspdinst.zip
- Unpack it
- Execute HASP_Install.cmd

To launch HASP_install.cmd on Windows XP just make double click on it.
To launch HASP_install.cmd on Windows 7, Windows 8 or Windows 8.1 click a right mouse button and select Run as administrator in context menu.

This script removes previous Sentinel RTE version and installs the new one.
So, you will get these two messages for each step:

at the beginning of each step and

at the end. Press OK button in this message each time it appears.

If installation completed successfully this web-browser page will be opened:

Finally, you should add process hasplms.exe and port 1947 as exceptions for anti-virus and firewall and connect Sentinel usb-keys back.

If you got any error while installing Sentinel HASP RTE, please, email at [4]support@ascon.net. Attach screenshot of the error.

```
function ShowHide(el) { var obj = document.getElementById(el); if(
obj.style.display == "none" ) { obj.style.display = "block"; } else {
obj.style.display = "none"; } }
```
