block, graphic.lyt

Problem (public)

I've created custom Title Block in Graphic.lyt library. But its name it isn't displayed in list, when I'm trying to apply it to current drawing. What shall I do?

Solution (public)

Title Block is a drawing template component. Create new drawing template in Graphic.lyt library (usually template should have the same name and number as Title Block). Include necessary Title Block in the template and set border parameters. Your custom Title block and Border, with specified parameters will appear on the sheet, when you apply the template.
