hasp, srm, activation, license, update

Problem (public)

How can I activate my Sentinel key or update its license data?

Solution (public)

Sentinel HASP key licenses can be updated remotely in 2 steps by means of kActivation utility.

Always use the [1]latest version of the utility!

Creating c2v-request

Launch kActivation and select type of the key you want to update - hardware (HL usb-key) or software (SL key). Software keys selected by default:

Select C2V REQUEST item in the left menu, check the key to be updated and click the Create C2V file button:

Save created c2v-request file anywhere on your computer and then send it to your ASCON Software distributor or to [2]contact@ascon.net.

Applying v2c-response

When you receive v2c-response file from your ASCON software distributor or from ASCON License Service, save it anywhere on your computer.

Then launch kActivation utility and just drag the v2c-file to utility window or select C2V REQUEST item in the left menu, click Apply V2C file button and browse to the file:

When update applied "Your update was applied successfully!" message appears.

If you got some error while applying update, please, email at [3]support@ascon.net. Attach you c2v- and v2c-files and screenshot of the error.
