### **Problem (public)**

The license server (Guardant SDK) with ASCON network software licenses was not found on the workstations.

### **Solution (public)**

Configuring the search for the license server

In the %ProgramData%\ASCON directory  
Create file license.ini

Contents of the license.ini file:

[Common]

host = address or domain name of the license server

Note: The file format is UTF-8 without BOM (without specification).
