corner, print, preview

Problem (public)

How can I precisely combine corners of the drawing in Print preview mode?

Solution (public)

In preview-window select command File-Output Settings, enable Assured Gap between Documents When Snapping On option, then set necessary meaning. Select the drawing, move cursor towards the corner of the drawing (cursor will look like angle in square). Press mouse left key, and, holding the button, move the drawing towards necessary drawing, until black rectangle appears in cursor trap. Release mouse button - drawings will be allocated with required spacing.
