expand, reduce, print

Problem (public)

Is it possible to provide expanding or reducing of drawing field location, during document print preparation?

Solution (public)

Components and size of different-size sheets of paper are depend on current printer/plotter features, if "Drawing location field" means sheet of paper size in "Print preview" command.
Sheet size can be changed by Plotter/Printer command (menu File) in print preview mode before printing or by "Plotter/Printer Setup" command (menu File) during document creating.
