### Keywords

HASP, nethASP, HASPnet, server, fileserver

### Problem (public)

Do I need to install HASPNet on the network file server?

### Solution (public)

No, that is not required.

You can install the HASP4 Net key and HASP License Manager on any computer within the network.

But keep in mind that the selected computer should be active and available and HASP License Manager should be loaded on it all the time while KOMPAS-3D is used on any computer within the network.
