archive, unpack, zip install

Problem (public)

I got a error when installing KOMPAS-3D ("Data1.cab file not found").
I got a error while unpacking installer archive ("not supported archive" or
"archive corrupted").

Solution (public)

ASCON software installers are packed with 7-zip file archiver. This is open
source software, most of its source code is under the GNU LGPL license.

IMPORTANT: always use the latest version of this archiver to unpack ASCON
software installer! You can download it at official web-site
[1]https://www.7-zip.org

To install ASCON Software, please, do the following:
  unpack downloaded ASCON Software installer with the latest version of 7-zip
archiver into some directory
- go to this directory
- run installation process from this very directory (not from unpacked *.zip
file!)
