Problem (public)

When you run and work in the application on a multi-core processor there is a high CPU usage. This problem occurs because of an incorrect name of system variable OMP_WAIT_POLICY created by the installer of version 1.0.4.16916. The OMP_WAIT_POLICY system variable name contains an extra space at the end of the variable name.

Solution (public)

Please edit the system variable name by deleting extra space at the end. Old name is "OMP_WAIT_POLICY ", new one is "OMP_WAIT_POLICY'. Restart the Renga Architecture application.
