Problem (public)

I have received KOMPAS-3D distributive disk and HASP4 protection key. How to start working with it?

Solution (public)

First of all you should install KOMPAS-3D.

During KOMPAS-3D installation HASP4 Device Driver automatically installed. See [1]this article to check if driver installed. If not, please, install HASP4 Device Driver manually: execute command `hinstall -i` for `<KOMPAS-3D installation directory>/hasp/drivers/hinstall.exe` file. You may also download HASP4 Device Driver [2]here.

If you use HASP4 local or time key just connect it to the computer. That is all, you are ready to work with KOMPAS-3D.

If you use HASP4 network key (red in color), you are to choose a computer which will function as license server and install HASP4 License Manager on it: prerequisites: license server must have static IP-address and at least one of NetBIOS, TCP/IP, IPX protocols enabled launch `lmsetup.exe` file in `<KOMPAS-3D installation directory>/hasp/servers/` and follow its instructions HASP4 Device Driver automatically installed during this installation. If it is not, please, installed it manually as described above connect HASP4 network key to the license server

Then you should configure `<KOMPAS-3D installation directory>/Bin/nethasp.ini` file on all client computers as described in [3]this article.

To use HASP4 network key locally (to run KOMPAS-3D on the license server itself) in addition to described above you are to install Microsoft Loopback Adapter (see [4]this article for example) and configure `<KOMPAS-3D installation directory>/Bin/nethasp.ini` file (see [5]this article) using `localhost` or `127.0.0.1` as servername.
